

Do you have an infant 6-12 months of age?

If so, you may be eligible to participate in a study of parent-child interactions during the complementary feeding process.

Purpose of the Study:

The complementary feeding period, during which infants are gradually introduced to solid foods, is an extremely important time for infant development—physically, mentally, and socially. We hope to learn more about how feeding experiences shape this period by studying parent-child interactions during mealtimes.

Participation Involves:

- Filling out a short online survey
- Providing an observation of a typical mealtime with your infant via secure video chat

Why Participate?

- You may help contribute to the knowledge of infant development
- All study procedures can be completed from your own home
- Participants will be compensated with \$15 in electronic gift cards
 - \$12 for video observation
 - \$3 for survey completion

You may be eligible if:

- You are the mother of a child between 6 and 12 months of age
- You are over the age of 18
